

ENZO ARIEL SASO

Sr. Frontend Engineer

With 5+ years of experience shipping production-grade web products, owning decisions from architecture to measurable business impact. Specialized in JavaScript, TypeScript, Node.js, React, and Next.js, with a strong bias toward clarity, scalability, and long-term maintainability. AI works under my standards: it generates code aligned with my conventions, architectural principles, and quality bar. Product-minded engineer who challenges assumptions, uncovers real constraints, and delivers solutions that move meaningful metrics.

MOST RECENT WORK EXPERIENCE

Senior Software Developer at uniteus.com

Dec 2023 - Present [USA] [Social Care Technology, B2B]

KEY ACCOMPLISHMENTS

- Contributed to the migration from React.js to Next.js, improving performance, routing, and long-term scalability.
- Refactored shared npm packages and removed legacy code within a microfrontend architecture, reducing technical debt and improving cross-team maintainability.
- Reviewed and unblocked pull requests across multiple teams, enforcing code quality standards and preventing integration issues.
- Fixed and deployed critical production hotfixes under time pressure, resolving urgent issues with zero downtime.
- Authored and improved technical documentation for key workflows, enabling smoother client onboarding and reducing operational friction.
- Actively engaged with technical leadership in architectural and implementation discussions, influencing technical decisions.
- Responded to time-sensitive production incidents, quickly diagnosing root causes and deploying fixes to minimize user impact and business risk.

Freelancer

July 2017 - Present

KEY ACCOMPLISHMENTS

- Delivered 30+ production websites for long-term clients, balancing speed, maintainability, and business requirements under tight deadlines.
- Designed and implemented AI-powered features using OpenAI models, enabling automation and content generation tailored to each client's workflow.
- Built complex business logic systems, including referral programs, loyalty points, role-based pricing, multilingual support, and gamification mechanics.
- Implemented dynamic pricing systems tied to real-time USD exchange rates, protecting clients from inflation volatility and manual repricing overhead.
- Integrated custom APIs and third-party services to extend platform capabilities while maintaining performance and reliability.
- Owned ongoing maintenance and critical migrations, including hosting changes with near-zero downtime and no data loss.
